

**1**

DeMount Tip

10°

Mount Tip

Before starting, make sure your handle is properly installed at approximately 10°

**2**

Remove set screw with allen wrench

**3**

Allow handle to hang off the end of a work bench. This will **secure the bar** while you remove the tip.

Flat surfaces of the tip should be perpendicular to the bench surface for proper function.

90°

**4**

Drive tip out with wrench and rubber mallet after securing the bar as shown

**5**

Align holes, then tap replacement tip in with rubber mallet

**6**

Reinstall set screw once holes are aligned

## Tools Required

Allen Wrench

Adjustable Wrench

Rubber Mallet

### No-Mar Mount/Demount Bar: Tip Replacement Instructions

- Mount tips and the DeMount tips are both installed the same way.
- Follow the instructions step by step.

\*Tips are considered a consumable wear item and are not covered under warranty. If you are bending or breaking a lot of tips, you are likely using the bar to pry instead of pull on the bead.

For more detailed instructions see our complete *video library* online @ [NoMarTireChanger.com](http://NoMarTireChanger.com)
